

SHRUB ROSE PLANT NAMED 'BAIEAM'

Abstract of the Disclosure

A new and distinct variety of landscape shrub rose plant is provided which abundantly forms on a continuous basis attractive semi-double rich fuschia blended with dark pink blossoms. The blossoms also display a slight sweet rose fragrance. The plant exhibits a compact and bushy growth habit, attractive glossy dark green foliage that initially bears a tint of red-purple, and good tolerance to Black Spot and Powdery Mildew. The attractive dark green foliage contrasts nicely with the blossom coloration. The new variety is particularly well suited for growing as attractive ornamentation in parks and gardens.
